

Cloud Transformation Capabilities

Department/Category: Sales

Synthetic demonstration document for the Infosys GPT project. This material is fictional and should not be treated as an official Infosys policy, guide, manual, sales asset, or SOP.

Purpose

This synthetic sales asset describes fictional demonstration capabilities for an enterprise cloud transformation portfolio. It is not an official company sales asset.

Cloud Assessment

The demonstration offering includes application and infrastructure assessment, workload classification, dependency analysis, and a prioritized transformation roadmap.

Migration Services

The portfolio includes migration planning, application modernization, data migration support, and post-migration validation.

Cloud Operations

Managed cloud operations can include monitoring, incident response, cost visibility, operational reporting, and continuous improvement.

Security

Cloud transformation engagements should incorporate identity management, access controls, data protection, logging, and security validation.

Business Outcomes

Typical demonstration outcomes include improved scalability, faster delivery cycles, operational visibility, and more consistent cloud governance.
